

Circuit Breaker Use

Your modified vehicle from Freedom Motors Australia, has been fitted with a Circuit Breaker. The circuit breaker is an essential component that ensures the safety and reliability of the electrical systems installed in your vehicle, protecting both the equipment and users from electrical hazards.

The circuit breaker has been fitted under the bonnet of the vehicle, near the battery. To activate the electrical items installed with your modification, push the yellow lever towards the red button till it clicks in.

If for any reason in the future while using your modified vehicle, the power seems to have switched off, ensure you check the circuit breaker first to see if it has tripped before calling Freedom Motors for help.

If for any reason the circuit breaker keeps tripping, this is an indication that there may be an electrical issue with one of your modified vehicle's installed electrical items. In this case, call your local Freedom representative for further instructions.
